

Support Tickets Data Analysis Report

Report Overview

Dataset: support_tickets_data | 50 Tickets | 12 Columns | Period: Jan 2023 – Jul 2023 | 5 Agents | 7 Issue Types

Executive Summary

Key Metrics at a Glance

- Total Tickets Analyzed: 50 — Full dataset, no missing records detected
- ⚠ Total Resolved: 23 (46.0%) — BELOW industry standard (~80%), significant backlog
- ⚠ Total Unresolved: 27 (54.0%) — More than half of tickets remain open
- ⚠ Overall Avg Satisfaction Rating: 2.82 / 5 — LOW; 46% of customers rated 1 or 2 out of 5

- ⚠️ Avg First Response Time: 131.5 min (~2.2 h) — Slow; Critical tickets avg 183 min — inverted SLA
- Avg Resolution Time: 664.6 min (~11 h) — High variability: range 46 min to 1,363 min
- ⚠️ Highest Volume Issue Types: Data Import & Billing (11 each) — 44% of all tickets; both have poor resolution rates
- ✅ Best Satisfaction Issue Type: Login Issue (4.33 avg) — Well-received; perceived as fast to handle
- ⚠️ Worst Satisfaction Issue Type: Report Generation (2.00 avg) — Only 20% resolved — chronic dissatisfaction
- ✅ Top Agent by Satisfaction: A003 (3.11 avg) — Best satisfaction AND fastest response (95.6 min)
- ⚠️ Most Tickets Handled: A004 (18 tickets) — 36% of all load; lowest resolution rate (38.9%)

2 Ticket Volume & Issue Type Analysis

Issue Type	# Tickets	% of Total	Resolved	Unresolved	Resolution Rate	Avg Satisfaction	Avg Res. Time (min)
------------	-----------	------------	----------	------------	-----------------	------------------	---------------------

- | | | | | | | | |
|-----------------|----|-------|---|---|-------|------|-------|
| Data Import | 11 | 22.0% | 6 | 5 | 54.5% | 2.36 | 721.2 |
| Billing Issue | 11 | 22.0% | 4 | 7 | 36.4% | 2.27 | 758.8 |
| Login Issue | 6 | 12.0% | 3 | 3 | 50.0% | 4.33 | 773.8 |
| Feature Request | 6 | 12.0% | 2 | 4 | 33.3% | 2.17 | 499.5 |
| UI Bug | 6 | 12.0% | 4 | 2 | 66.7% | 3.67 | 586.0 |

• API Issue		5		10.0%		3		2		60.0%		3.80
505.4												
• Report Generation		5		10.0%		1		4		20.0%		2.00
769.4												
• TOTAL		50		100%		23		27		46.0%		2.82
664.6												

💡 Insight: Data Import and Billing together account for 44% of all tickets yet have resolution rates of only 54.5% and 36.4% respectively. UI Bug has the best resolution rate at 66.7% and Login Issue commands the highest satisfaction at 4.33.

3 Priority Level Analysis

- ⚠️ Critical (7 tickets, 14%) — 71.4% resolved | Avg Response: 183.3 min | Avg Resolution: 691.6 min — Slowest response despite highest urgency (SLA inversion)
- High (19 tickets, 38%) — 52.6% resolved | Avg Response: 112.3 min | Avg Resolution: 707.8 min — Largest group; moderate resolution rate
- ⚠️ Medium (12 tickets, 24%) — 33.3% resolved | Avg Response: 112.2 min | Avg Resolution: 665.3 min — Low resolution rate, requires attention
- ⚠️ Low (12 tickets, 24%) — 33.3% resolved | Avg Response: 144.2 min | Avg Resolution: 627.3 min — Low resolution; slower response than High/Medium

💡 Insight: The most alarming finding here is SLA inversion — Critical tickets receive the SLOWEST average response (183.3 min), worse even than Low priority tickets (144.2 min). Priority tiers are not being respected operationally.

4 Agent Performance Analysis

- ✅ A003: 9 tickets | 55.6% resolved | Satisfaction 3.11 | Avg Response 95.6 min | Avg Resolution 765.7 min — Best satisfaction & fastest response time

-  A002: 9 tickets | 66.7% resolved | Satisfaction 2.89 | Avg Response 146 min | Avg Resolution 790.3 min — Highest resolution rate; most effective closer
-  A004: 18 tickets | 38.9% resolved | Satisfaction 2.89 | Avg Response 141.6 min | Avg Resolution 567.2 min — 36% of all load but lowest resolution rate
-  A005: 7 tickets | 28.6% resolved | Satisfaction 2.86 | Avg Response 114.9 min | Avg Resolution 829.1 min — Worst resolution rate & highest resolution time
-  A001: 7 tickets | 42.9% resolved | Satisfaction 2.14 | Avg Response 138.3 min | Avg Resolution 541.7 min — Lowest satisfaction score; coaching urgently needed

 Insight: A004 handles 36% of all tickets but has the lowest resolution rate (38.9%) — a clear sign of overload degrading quality. A003 and A002 are top performers with available capacity to absorb reassigned tickets.

5 Customer Satisfaction Distribution

- Rating 1 — Very Dissatisfied: 9 tickets (18.0%) | Cumulative: 18.0%
- Rating 2 — Dissatisfied: 14 tickets (28.0%) | Cumulative: 46.0%
- Rating 3 — Neutral: 9 tickets (18.0%) | Cumulative: 64.0%
- Rating 4 — Satisfied: 13 tickets (26.0%) | Cumulative: 90.0%
- Rating 5 — Very Satisfied: 5 tickets (10.0%) | Cumulative: 100.0%

 Insight: 46% of customers rated 1 or 2 out of 5 — nearly half are actively dissatisfied. Only 10% gave a perfect rating. The satisfaction baseline is well below acceptable thresholds for a healthy support operation.

6 Response & Resolution Time Analysis

- Response Time — All Tickets: Min 15 min | Max 240 min | Avg 131.5 min — Wide spread indicates inconsistency

- ⚠️ Response Time — Critical Only: Min 121 min | Max 235 min | Avg 183.3 min — SLOWEST response of any priority; inverted SLA
- Response Time — High Priority: Min 33 min | Max 240 min | Avg 112.3 min — Better handled than Critical
- ⚠️ Response Time — Low Priority: Min 33 min | Max 235 min | Avg 144.2 min — Slower than High/Medium despite lower urgency
- Resolution Time — All Tickets: Min 46 min | Max 1,363 min | Avg 664.6 min — 30x variance erodes customer trust
- Resolution Time — Feature Request: Min 105 min | Max 1,230 min | Avg 499.5 min — Fastest avg resolution category
- ⚠️ Resolution Time — Report Generation: Min 185 min | Max 1,363 min | Avg 769.4 min — Slowest category; only 1 of 5 resolved
- Resolution Time — Login Issue: Min 194 min | Max 999 min | Avg 773.8 min — Slow but high satisfaction; indicates quality handling

💡 Insight: A 30x spread in resolution times (46–1,363 min) signals deeply inconsistent processes. Customers cannot predict when they will get help, which directly erodes trust even when the final outcome is positive.

7 Key Findings & Actionable Recommendations

F-01 — Critical SLA Inversion

🔍 Critical tickets have the SLOWEST avg response (183 min), worse than Low priority (144 min). Urgency tiers are not being respected.

✅ Implement hard SLA caps: Critical ≤30 min, High ≤60 min, Medium ≤120 min. Add automated escalation alerts for any breach.

F-02 — High Unresolved Rate (54%)

🔍 27 of 50 tickets are unresolved. Report Generation (80%) and Feature Requests (67%) are the worst categories. Backlog is growing.

✓ Dedicate A002 (best resolution rate 66.7%) to clear the backlog. Set weekly resolution targets per category.

F-03 — Low Customer Satisfaction (2.82/5)

🔍 46% of customers gave ratings of 1–2. Billing and Data Import are the primary drivers of dissatisfaction.

✓ Create specialized resolution playbooks for Billing and Data Import. Introduce proactive follow-up communications post-resolution.

F-04 — Agent A004 Overloaded

🔍 A004 handles 36% of all tickets (18/50) but has the lowest resolution rate (38.9%). Overload is visibly hurting quality.

✓ Cap A004 at ~12 tickets. Route new tickets to A003 and A002 who have capacity and stronger performance metrics.

F-05 — Agent A001 Satisfaction Deficit

🔍 A001 scores 2.14/5 — lowest of all agents and well below the 2.82 team average. Affects 7 tickets.

✓ Review A001 ticket transcripts for recurring patterns. Implement targeted coaching and pair with A003 as a mentor.

F-06 — Report Generation Critical Failure

🔍 Only 1 of 5 Report Generation tickets (20%) resolved. Avg satisfaction is 2.00 — worst of all categories.

✓ Escalate to the product team as a likely systemic bug. Audit all 4 open tickets. Set a 48-hour resolution SLA for this category.

F-07 — Resolution Time Variance (30x)

🔍 Resolution times range from 46 to 1,363 minutes. This level of unpredictability damages customer trust and experience.

✓ Define max resolution SLAs per category. Automatically flag and escalate any ticket exceeding 2x the category average.
